

Additional Information Sheet

September 2008

CDL Requirements

A mechanic must meet current CDL requirements prior to picking out of CSC. If a mechanic is bumped out of CSC, he/she has 90 days to meet CDL requirements. The requirements include the Class A CDL with air brake and passenger endorsements. Wrecker training materials and videos are available in Fleet Engineering.

Non-Revenue Vehicle Shop

The NRV services and repairs a wide variety of vehicles including forklifts, push trucks, automobiles and trucks – up to and including heavy-duty diesel trucks. Mechanics perform routine inspections and repairs on transit vehicles. They use a wide variety of automotive equipment and tools including electronic diagnostic equipment. NRV currently utilizes a computerized mechanics work order station. AC and unpicked vacation will only be granted as staffing level and/or workload permits. Per Local 587 Collective Bargaining Agreement, NRV positions **for Lead Mechanic and Mechanic** will be picked once each year **at the first pick of the year.**

NOTE: NRV Lead Mechanic and Mechanic positions will be picked next in Feb 2009.

Mechanic Inspection Certification Training

Prior to starting their inspection duties, any mechanic picking inspections must have attended inspection standards training within the last year unless he/she is currently a full-time inspector. At least one class will be provided between the pick and the time shake up starts (Maintenance Procedure #66).

Atlantic East and South Base Leads

To ensure lead coverage on weekends, some lead positions will be posted with “MID” (midweek) for RDO. Leads that pick these positions must notify the Executive Board Officer/designee conducting the pick what their RDOs will be for this service change.

South Base Mechanics

The term "Usually W/E Insp/PM Project" used on some SB mechanic positions means:

This position will do weekend inspections. If no inspections are scheduled for the weekend, the position will work on any PM Projects that may be generated by M5.

New Pick Location

The new pick location (for regular job classes only) is in the Central Base elevator lobby, upper floor, next to the lunch room. This location has easy access, plenty of space to put up the pick sheets and keeps the lunch room freed up for employee use.

ESW/Stores Drivers

The new contract between Metro and Local 587 merges the positions of ESW and Stores Driver. There are currently 2 stores driver positions and employees that are affected. The contract grandfathers the 2 existing Stores Drivers into the Stores Driver spots until they opt to pick out to a regular ESW position. At that time the Stores Driver position will become a regular ESW position with a designation of “Usually Stores Driver” and will be available to ESWs for picking by seniority like any other ESW spot.

The current two Stores Drivers must inform the Union **IN WRITING – BEFORE** THE ESWs BEGIN TO PICK – of an intention to pick into either (1) a regular ESW position or (2) the other Stores Driver position. If the Union Eboard members working the pick do not hear from the Drivers, they will assign the Drivers their position from their last picked assignment.

CSC ESW positions may be used as relief drivers of stores trucks.
